Applicant is filing this paper on November 28, 2006, which is within the reply period.

#### IV. Restriction and Election of Invention with Traverse

In response to the Examiner's restriction and election of invention requirement, Applicant provisionally elects, with traverse, invention of Group 1, which is drawn to a method of treating hot flashes in female patients. Applicant submits that at least claims 1, 2-9, and 16-18 read on Group 1.

Applicant respectfully submits that the restriction requirement and the election of invention requirement are unwarranted since both Group I and Group II are similarly classified under class 514 and subclass 238.8. The underlying feature of the invention is the use of reboxetine or S,S-reboxetine to treat hot flashes in patients, regardless of gender. As such, a search of the claimed method would be limited to the recited

compounds for the treatment of hot flashes; distinguishing between patient gender would not significantly reduce the scope and complexity of the search. Applicant respectfully submits that the search and subsequent examination of Groups I and II would not be overly burdensome, therefore, examination of the entire application is proper.
